

TrapServer™

by SchoRen NMS Solutions, LLC

Notification Manager

Email/Paging Notification for Alarm Management

- Manages notification through email, paging, trap-forwarding or API.
- Automatically** Notifies responsible technician based on definable filtering by Area-Of- Responsibility.
- Monitors SNMP, ASCII, TL-1, TBOS MODBUS, Badger 481, Larse and MCS-11 protocols
- Logs all Alert messages for future retrieval
- Alerts are sent upon failure on the ASCII monitoring link
- Sends/Displays reminders of Current Alarms at User defined intervals
- Remotely Acknowledge Alarms through reply email (optional) or from the WEB.

TrapServer™ is a comprehensive monitoring tool for your Multi-Vendor network by consolidating, storing, displaying and notifying your technicians of detected events from within your network.
